

Title: Application Volume	
Estimate: 7 days	Card #: 1.0.0.0
Description: allow the user to set the volume that certain apps run at.	

Estimate justification: Seven days is a number of necessity and scale based on the time I currently have to complete this project. I think it is possible to meet. Time is given to research and testing and pursuing other priorities.

User Story scope: This user story does not need to be broken up.

Assumptions: My assumption cannot be expelled at this moment. I am assuming that I can use an android API to refer apps by some sort of arbitrary ID #. I am assuming it is possible to implement this in threads. I am assuming I can garner the necessary information in time.

Title: Volume Scheduler	
Estimate: 7 days	Card #: 2.0.0.0
Description: add a scheduling that sets the volume at certain level during scheduled times on a calendar.	

Estimate justification: Seven days is a number of necessity and scale based on the time I currently have to complete this project. I think it is possible to meet. Time is given to research and testing and pursuing other priorities.

User Story scope: This user story does not need to be broken up.

Assumptions: My assumption cannot be expelled at this moment. I am assuming it is possible to implement this in threads. I am assuming I can garner the necessary knowledge in time. I am memory management goes well when implement the threads. I am also assuming that writing a script will be simple.

Title: Anytime Volume Control	
Estimate: 10 days	Card #: 3.0.0.0
User can adjust volume and vibrate levels anytime.	

Estimate justification: I think it is possible to meet. Time is given to research and testing and pursuing other priorities. This is just arbitrary and I think I will take a lot longer.

User Story scope: This user story does not need to be broken up.

Assumptions: My assumption cannot be expelled at this moment. I am assuming this is even possible without dramatically rewriting the Android OS. I am assuming I can garner the necessary knowledge in time.

Title: A better Interface	
Estimate: 4 days	Card #: 4.0.0.0
Add an interface that is much more precise and simple than other volume control applications.	

Estimate justification: Four days is probably more than enough. I am essentially doing this anyway with the overall project. But I am just making interface that allows more precision and lets the user know with no need for research which volumes pertain to which functions.

User Story scope: This user story does not need to be broken up.

Assumptions: I am working with android which I have little experience with. So the assumption that everything goes well when I am working on a that demands I radically expand my knowledge base.

Title:	Iteration Plan
<ul style="list-style-type: none">• Iteration 1 (21 days)<ul style="list-style-type: none">–Card # 2.0.0.0–Card # 4.0.0.0–Card # 3.0.0.0 (If possible)	

Estimate justification:

User Story scope:

Assumptions:

Title:	Iteration Plan
<ul style="list-style-type: none">• Iteration 2 (at least 21 days)<ul style="list-style-type: none">–Card # 3.0.0.0 (If possible)–Card # 1.0.0.0	

Estimate justification:
